POSTER PRESENTATION

Governed vocabulary publishing with K-Maker

The Australian Thesaurus of Education Descriptors as a practical case study

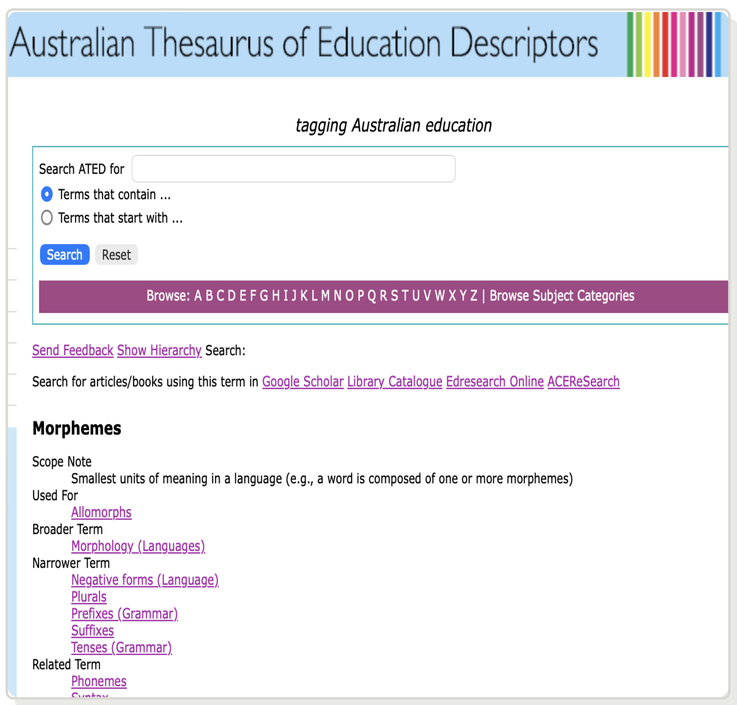

Les Kneebone · KurrawongAI

THE PLATFORM STORY

K-Maker turns legacy thesaurus data into a vocabulary that remains portable across hosting options.

01 Legacy expression

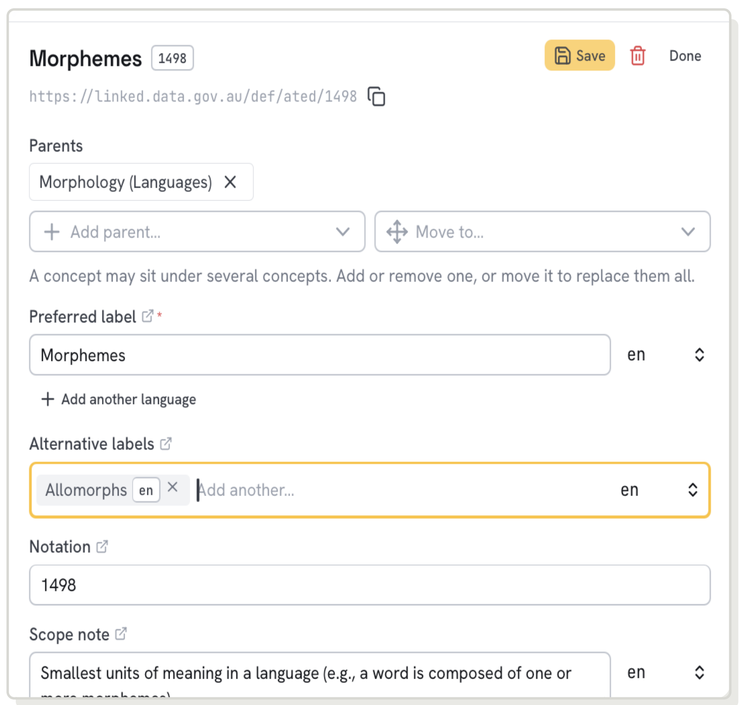

MultiTes HTML: meaning visible to people, but implicit to machines

Existing content and familiar thesaurus relationships

02 Governed editing

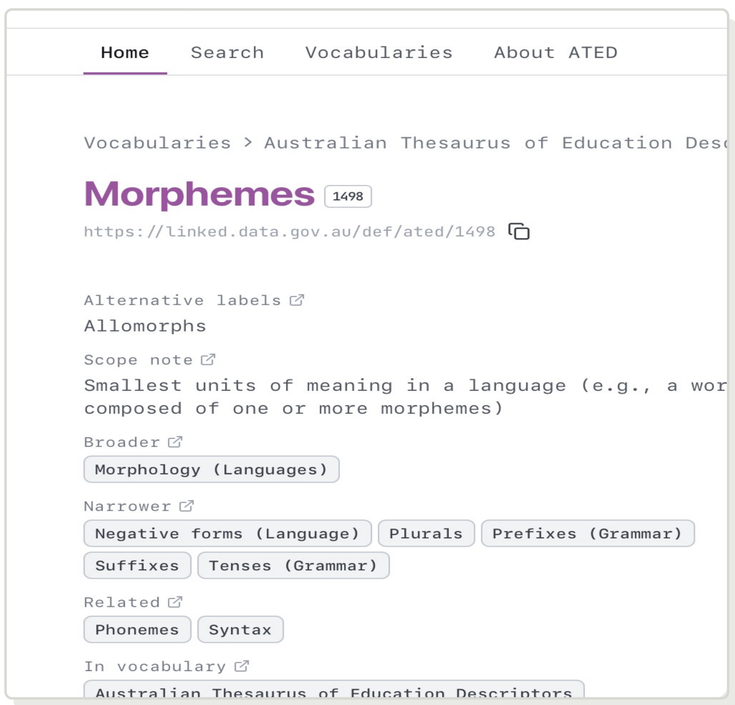

K-Maker: identifiers, labels, notes and relationships maintained together

Edit, review and validate one governed source

03 Published vocabulary

A branded site for discovery, with the same RDF available to systems

Publish for humans and machines without changing identifiers

Making implicit meaning explicit

The migration preserves ATED's meaning while expressing it with durable Web identifiers and standard SKOS semantics.

Legacy expression	Semantic Web expression
TNR 1498	stable HTTP IRI + skos:notation "1498"
Used For / UF	skos:altLabel
Broader Term / BT	skos:broader
Narrower Term / NT	skos:narrower
Related Term / RT	skos:related
Date Added Jan 84	"1984-01"^^xsd:gYearMonth
English display text	"Morphemes"@en

What required work

YAML mapping rules
RDFLib transformation
SHACL validation
Resolution of label-based links
Search deduplication and clear "matched on" presentation

5,280 CONCEPTS · PORTABLE RDF

Hosting can change; identifiers do not.

RDF handover | managed K-Maker | dedicated or client-hosted

A maintainable vocabulary, not a one-off conversion

ATED demonstrates a reusable path from legacy thesaurus data to governed editing, validation and publication. K-Maker keeps the data portable while giving vocabulary owners a practical place to maintain it.
